

**biosafety4u.berlin GmbH and Cellcolab GmbH
create cooperation for boosting the startup ecosystem.**

Berlin, Hamburg, 15 February 2024

biosafety4u.berlin GmbH, a service provider for genetic engineering facilities in Germany, and **Cellcolab GmbH**, creating flexible on-demand lab space fully equipped and ready for research, announce today a joint cooperation to help biotech startups boosting their ideas off the ground faster.

Cellcolab offers laboratories for short- and medium-term use. Innovative, agile and cost-efficient, in Hamburg and soon also in Berlin. For startups, outsourcing, and projects **Cellcolab** provides:

- Laboratory units from single bench to 80 sqm lab suite
- Fully equipped laboratories and additional services
- Individualized solutions for research-oriented startups

“We receive regular requests for small, flexible and fully equipped laboratory units.”, states Christian Lange, Quality Manager GLP GCLP and Biosafety @ biosafety4u.berlin GmbH. “Biotech start-ups often need on-demand available workspaces for their research, in many cases in combination with a regulatory service package. Young scientists want to spend resources on the idea, not on regulatory paperwork.”

Gregor Kindelmann, Managing Director @ **Cellcolab GmbH**, adds: „ With biosafety4u.berlin we found the optimal partner to support our customers with a one-stop-shop solution for their regulatory processes and for establishing best practices early on. This cooperation allows to speed up”.

About biosafety4u.berlin

The company is a client-oriented service provider supporting biolabs and genetic engineering facilities in all aspects of biological safety throughout the entire facility life cycle: Project phase, operational phase, retirement phase.

biosafety4u.berlin serves novel food producers, distributors, start-up hubs, cell-line developers as well as in vivo research facilities with its expertise and is currently approved by competent authorities in seven federal states of Germany.

About Cellcolab

With its customized lab solutions from single-bench to individual laboratory for time-limited use and access to the latest equipment and technologies, Cellcolab meets the needs of start-ups and industry projects.

Further service packages with assay-ready cells, consulting, instrument times, additional personnel and CRO make it a unique building block in the Berlin life science ecosystem. Located in the start-up centre BerlinBioCube, Cellcolab offers proximity to startups, research institutes and medical clinics, facilitating inter-institutional as well as interdisciplinary work.
